The Right System Configuration for Every Facility

Kidde ECS Series …

Flexible Protection for Small and Medium-Sized Applications

The Kidde ECS Series FM-200 System is an engineered system computer-designed to protect a specific enclosure.
Advantages

Faster reaction than water-based systems (seconds as opposed to minutes).

Small floor space requirement (smaller footprint than inerting systems).

Flexible location of agent storage cylinders.

Typical Applications:

Data processing Center
Process control rooms
Clean manufacturing areas
Bank vaults
Simulators
Battery backup rooms.

Design Criteria

Kidde FM-200 systems are recommended for the protection of facilities where one or more of the following conditions are involved:

The value of the facilities contents (such as a museum) or the importance of the facility to company's business continuity (for example, a data processing center) requires a fire suppression system that can react in seconds.

Water sprinkler systems are not available, or if present may damage the contents of the facility to be protected or pose an electrical safety problem for fire fighters.
